PAM for ERP basic is suited for medium-sized SAP® customers and international corporations alike and offers comprehensive features for a quick and economic introduction to the world of document management for SAP®.

PAM for ERP basic for use with SAP®

Where SAP® is to remain the leading application, **PAM for ERP basic** is the right choice:

- Capture documents after processing in SAP® is completed using the **PAM for ERP basic Scanlient** and link them through barcode with SAP business objects (**late-archiving** method).
- Scan documents for handing them over to SAP® workflow scenarios (**early-archiving** method) and save time with near-paperless processes.
- Archive print lists (ALF) automatically from invoicing runs or outbound documents (PDF) such as quotations or purchase orders placed with vendors.
- Streamline your SAP® productive system by **archiving reorganization data**.
- View the documents belonging to the SAP® posting record on screen. Archived documents are retrieved directly from the SAP® application by means of OLE components. Use the SAP® Viewer or the PAM for ERP Document Viewer with annotation feature to view documents.
- **The supplied Migration Client** copies documents reliably and easily from existing third-party archives **into PAM for ERP basic**.
- Documents and data under duty to be preserved can be protected from deletion (by stipulating a retention time) in the archive. This ensures that archived documents cannot be deleted from the archive prior to a set date. In combination with revision-safe media your systems fulfills very complex compliance requirements.

By opting for PAM for ERP you invest in the future of your company. Because at the core is the Professional Archive Manager (PAM) archive server which provides interoperability with other H&S EUROPE products such as e-mail, file and SharePoint Archiving and can be expanded to a complete ECM system.

PAM for ERP enterprise

The high-speed archive system for SAP® at a fair price.

SAP® applications are sometimes only used in certain specialized departments. Employees without SAP® do not have access to archived documents even though this would be desirable.

PAM for ERP enterprise for use with SAP®

The Enterprise extension helps you convert PAM for ERP basic into a high-performance system for system-wide document management.

Search terms from SAP® databases are automatically added to archived records in order to facilitate document search outside of SAP® applications. In addition, PAM for ERP enterprise imports all documents (manually or automatically) from other systems, such as e-mail, MS-Office, external CRM/ERP applications, into the central archive, thus providing a lasting solution for media inconsistencies.

SAP® offers electronic transaction processing using workflow scenarios that help organize workloads more efficiently. This type of process optimization is not used often due to the fact that licensing for employees to be included in the workflow is expensive and requires extensive training.

With PAM for ERP enterprise you can benefit now from these positive effects. Start a task in SAP® (e.g. releasing incoming invoices) to carry out the actual release process in PAM for ERP enterprise. Following the last release transaction, the task is returned to SAP® and completed.

Since the PAM for ERP enterprise client was developed exclusively for archiving and workflow tasks, licenses are significantly more reasonably priced compared to SAP® client licenses.
